

United Rentals offers custom engineered equipment for data center flushing projects of any size. Whether your system needs to go on a roof or inside a building, our equipment is designed to minimize size and weight and built specifically to meet the needs of your site.

# Data Center Flushing

## Unmatched Responsiveness

- Time sensitive flush? We'll have your equipment delivered on time, every time.
- Schedule pushed? We'll ensure your equipment remains available until needed.
- Flush design changed at the last minute? We'll mobilize additional assets to meet your needs.

## Quality Equipment

- Dedicated fleet of clean room pipes, hoses and fittings
- Specialty pumps designed for flushing
- Stainless and carbon steel filters from 100 gpm to 5,000 gpm
- Electric and diesel driven pumps up to 45,000 gpm
- Custom designed manifolds and progressive manifolds for rapid installation and efficient flows
- Custom sized secondary containment for all of our equipment
- Ultra-sonic and Doppler flow meters
- Chemical injection skids
- Remote monitoring of flows and pumps
- A complete range of chemicals

## Turnkey Solutions

- Our experienced team will assist you in all phases of critical flushing and passivation
  - Design and engineering
  - Drawings and modeling
  - Equipment acquisition
  - Installation
  - Operation
  - Monitoring and documentation
  - Chemical cleaning and passivation
  - Equipment removal
  - Final turnover to system owner
