

Minimize tool loss and maximize utilization with improved asset visibility, accountability, and efficiencies.

Asset Tracking System

Asset tracking

- Geo fence capabilities
- GPS/Bluetooth enabled equipment can track tools
- Ability to track both rented and owned equipment/tools

Location and usage data

- Fixed gateways
- Over 100,000 telematics-equipped assets
- Performance dashboard with usage data and information

Tool utilization reporting

- Underutilized assets identification
- Overstocked items alerts
- Data driven insights

Get Proven Results with Asset Tracking

See how United Rentals' innovative turnaround tooling solution reduced loss and improved efficiencies for a large chemical producer.

The Challenge

A large multi-chemical facility focused on ethylene production in the Gulf coast needed to perform a high-stakes turnaround that minimized facility downtime while working through complex maintenance and repair scenarios. From experience, the chemical producer knew that keeping the many craft workers running 24/7 would require a large number of necessary tools.

The Solution

Working from an initial contractors tooling list, United Rentals proposed a Mobile Tool Trailer solution to provide all necessary tooling. A Tool Trailer Coordinator was also onsite 24/7 to act as a liaison between the chemical producer and the numerous turnaround contractors. The coordinator assessed and managed tooling needs in real time, ensuring that tools not included in the initial tooling list could be provided quickly to keep turnaround personnel focused on the job at hand.

The chemical producer also utilized United Rentals' proprietary Asset Tracking System to get real-time updates of high-value tool locations, ensuring an enhanced level of contractor accountability.

The Results

With the onsite tooling trailer, 24/7 tooling coordinators, and the Asset Tracking System, five full working days were eliminated from the initial turnaround schedule, representing a greater than 10% productivity improvement and better than an estimated \$12M in realized revenue.

A further estimated \$2M was realized through contractor labor savings, consumable reduction, lost tool and cost-to-own savings.
