

United Rentals is the world's largest rental equipment provider, but we offer much more than a robust fleet. As leaders in data insights, we provide a telematics solution across a range of technologies to help you manage owned and rented fleet more efficiently and effectively.

Telematics Solutions

Monitor

- Current asset location
- History of past locations
- Real-time utilization
- Engine run time
- Visibility of all rented and owned assets in one place - Total Control®

Alerts

- Preventative maintenance alerts
- Under-utilized assets
- Fuel management
- Geo fencing alerts
- Training certifications

Control & Analytics

- Access control via keypad or RFID cards
- Lock out equipment remotely
- Time & date stamp operator usage
- Trend reporting
- Benchmarking of results against peer groups

MANAGE OWNED AND RENTED FLEET. REDUCE DOWNTIME.

Inefficient fleet management cuts into your productivity – and your bottom line. Lack of visibility, outdated or ineffective management processes, too many vendors and sub-standard equipment utilization make it challenging to keep projects on track.

RENTED FLEET. READY TO GO.

With more than 85% of our applicable equipment up-fitted and ready to go, access to telematics data is as easy as renting equipment and accessing visibility via Total Control®.

STANDARD FEATURES. ACTIONABLE DATA.

Telematics hardware options provide standard features to include current location, breadcrumb mapping of past locations, utilization, and engine run-times. Actionable data for delivery of measurable results.

VISIBILITY. ALL IN ONE PLACE.

Access displays, maps, alerts and tools with Total Control® – from any device.

MONITOR & MAINTAIN. OWNED EQUIPMENT.

Telematics solutions can be easily integrated onto customer-owned equipment using the same robust platform as rented units. United Rentals can also inspect, maintain, and repair your customer-owned equipment - leveraging telematics data to alert designated recipients when service or repair is required, while providing current location of the asset.

ACCESS CONTROLS. ADVANCED DEVICES.

Want to better manage access and safety? With advanced devices you can prevent unauthorized and unsafe operation by specifying who can use which machines on the jobsite. Administrators can control access by user, training requirements, specific days or times, and more. Historical data delivers time and date of past operator usage.

NEW FEATURES. EVOLVING SOLUTIONS.

We are always adding new functionality to help you work better, safer and smarter. New features include: Bluetooth tracking for tools and small equipment, remote monitoring for pumps & generators, safety alerts and more!

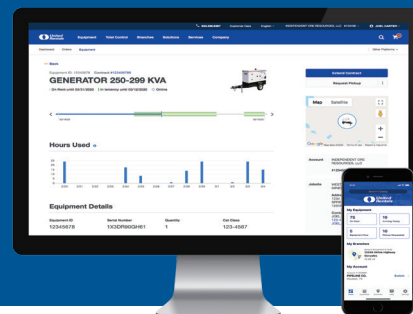

TOTAL CONTROL FROM OUR SITE TO YOURS

Track equipment, control costs, access invoices and request pick-up online. With our easy-to-use interface you can manage your entire rental and owned fleet and make actionable decisions to keep projects on schedule and on budget.
